

Shopping List

Assorted 4" annuals
Potting soil
Time release fertilizer
Gravel or crock
Large ceramic or plastic container

Add about a 1/2 inch of gravel to the bottom of the container to aid with drainage. Next, fill the container about 3/4 of the way up with soil. Arrange your annuals in the container. Keep low growing varieties towards the front of the container and more vertically growing varieties towards the back.

Water all the plants thoroughly and remove them from their pots.

Scoop back a handful of soil and position each plant so that the root ball is 1/2 inch below the container's rim.

Once planted, firm the soil around the sides and corners to eliminate any air pockets.

Add a little slow release fertilizer to the container and water thoroughly.
